# Sprint Review 3

- <u>Features implemented</u>
    - login/signup has been initially implemented

- <u>Issues fixed</u>
    - Gained a better understanding of databases to properly implement accounts and authentication next sprint

- <u>Implementation review</u> *(What went well in the implementation, what problems occurred, how problems were solved)*
    - The implementation that was completed went well
        - Made less progress than expected on the coding aspect
    - Some of the member had errors occurring when the repo was cloned, and were unable to make progress because of this
        - Issues seem to be with the gradle and build, but were unable to be resolved
        - The plan to address this is to reach out to Max and/or Sepidah during office hours to problem solve

- <u>Changes made</u>
    - Sequence Diagrams Created
    - Domain Models Created

- <u>Plans for next sprint</u> *(What will be done for the next sprint)*
    - Will get more features coded/implemented
        - Most likely the travel log / itinerary
        - Also implement a database for accounts and authentication

- <u>Scrum Review</u> *(What went well in Scrum, what could be improved, and what changes will be made)*
    - We had inconsistent meetings this week, but had decent communication in Google chat.
